CONDITIONING & REHAB
AQUA TREADMILL

Our Mission

To provide unforgettable, top-notch equine care by providing top-level care to condition and rehabilitate their equine partner to increase performance and stand out as champions in their field.

We offer exceptional service in order to help your equine athlete compete at their best

Benefits of the Aqua Treadmill

Adjustable based on need

Training on the water treadmill has been proven to enhance endurance and power. Water depth, incline and belt speed are used to provide a controlled environment for the rehabilitation of spinal conditions or injuries of the extremities.

Expedite Muscles with less pressure

The development of specific muscle groups can be expedited and buoyancy lowers the high pressure acting on the skeleton and tendons

Stronger Top-line

Movement against the pressure of water motivates the horse to increase their natural movement pattern. This leads to more use of back and rear muscles creating a stronger top line, more balance and co-ordination.
